Profile

I am a self-taught front-end developer who began my coding journey in 2021. Due to world-wide covid restrictions, I was unable to work as the airline industry was greatly affected by Covid-19. I wanted to pick up a skill during that time. Web development was something that caught my attention as I was intrigued by how something so commonly used by my generation was created and how every component of a particular website performed its function.

I studied using a range of different platforms such as FreeCodeCamp, Youtube tutorials and Scrimba and have created different projects, both big and small. Putting what I learnt into a project really allowed me to understand what was happening with each line of code and improved my understanding of the language that I was using.

My personal aim is to improve at how I write code more efficiently and make it more readable. This way, I am able to create better projects that might be used by others in the future.

When I am learning a new library, I tend to find myself using their documentation as I want to know how a line of code is working instead of just making what I am making work.

What began as something to pass time during lockdown is now a career that I am interested in. I look forward to having more experienced developers and a team to teach and guide me.

Work

Cathay Pacific Airways - Flight Attendant

May 2016 - PRESENT

Provide world-class customer service and ensure aircraft safety protocols are complied with and handle medical emergencies and evacuation situations when they arise.

Golden Wok - Supervisor

Nov 2020 - PRESENT

Handle food orders/payment and answer any questions customers have. Ensure food is handled and packed properly. Responsible for opening and closing, final cash count and payment of staff.

Metropolitan Police - Special Constable

Jul 2019 - Dec 2020

Carry out a variety of duties such as emergency response calls, patrols, safety and anti-crime initiatives, improving community relations, arrests

Skills

- HTML
- CSS
- Javascript
- React
- Redux
- Github
- Typescript (In progress)

Projects

Most of my projects can be found on my Github with information about them on the Readme section. Projects including:

Pokemon Pokedex

This React project was to refresh my memory on APIs and how to manipulate data. Utilizing Axios and Redux async thunk to fetch from the Pokemon API. The app is fully responsive using CSS.

Flashcard App

The reason I started this project was so I can have something to use as a learning aid specifically for my coding study. It was useful in learning things like Javascript methods. This project used minimal CSS and focused more on Javascript functions.

Takeaway Website

This is one of the projects that I spent a lot of time on as I planned on having it go live to represent the takeaway restaurant I am working at. The core focus of this project was to familiarize myself with React as this is the biggest project that I've made to date with many different components.

Education

University of Brighton

Biomedical Science BSC (Hons) - 2012-2015

Diploma of Higher Education

Chatham Grammar School for Boys

A-Levels (AQA) - 2010-2012

Biology (C), Chemistry (C), Sociology (C)

New Brompton College

GCSE - 2005-2010

8 A*-C
